

CLÉ DE LUNE PRESENTS

MILKEYWAY

SPACE RULES

Explore · Collect · Conquer the Galaxy

2-4 Players

10-30 Min

Ages 8+

77 Cards + 1 Lucky Card

Race your fellow stargazers to gather all **eight planets** of the solar system. Lock in your first four, snatch the last four in one swift move — and the galaxy is yours.

A card game for stargazers, moon lovers & space enthusiasts · Designed by Sahar Gabriel

1 Objective

A perfect blend of luck and strategy.

Be the first explorer to collect all **eight planets** of the solar system. The chase happens in two stages — and the final dash must be made all at once.

Mercury

Venus

Earth

Mars

Jupiter

Saturn

Uranus

Neptune

Stage 1

Secure four planets

As soon as you have gathered **four different planets**, place them **face up** on the table. They are locked in and safe — your foundation among the stars.

Stage 2

Claim the final four

Quietly collect the **remaining four planets** in hand. You must hold them **all at the same time** — then reveal them together with your secured four to complete the set of eight and **win**.

VICTORY

All eight planets, revealed at once 🏆

The instant you can lay down the last four planets simultaneously beside your secured four, you conquer the galaxy and win the game.

WILD COMBO

The Key + the Moon

Held together during Stage 2, the Key and the Moon can stand in for **any one planet** you're still missing — a lifeline to complete your collection.

2 Setup

Open the box, count your crew, and deal.

In the box

77 playing cards · 1 Lucky Card (the Key) · 1 Space Rulebook. The deck holds the eight planets (in several sets), plus Pluto and the special power cards.

Adjust the deck to your crew

The more players, the more planets in play. Trim complete planet sets from the deck before you shuffle:

PLAYERS

PREPARE THE DECK

2 players

Remove **two** full planet collections from the deck.

3 players

Remove **one** full planet collection from the deck.

4 players

Keep the deck **unchanged** — play with every card.

1 Shuffle the prepared deck thoroughly.

2 Deal four cards **face down** to each player. The rest forms the **draw pile** in the middle.

3 Check your **opening hand**. If you were dealt a **Black Hole** or a **Meteorite**, you must reveal and resolve it **immediately**, before the first turn begins.

DON'T SIT ON A HAZARD

Black Hole & Meteorite are forced plays

Whenever one of these lands in your hand — at setup or drawn during play — it must be played at once. You can't hold it back for a better moment.

3 How to Play

Play moves one player at a time, clockwise.

On your turn you take just two beats: **draw one**, then **play one** (or hold).

1 Draw **one card** from the draw pile into your hand.

2 Play **one card** — and only one — to trigger its effect, or choose to **play nothing** and pass. Planets you wish to keep simply stay in your hand (or get secured once you reach four).

3 Pass play to the next explorer.

EMPTY PILE?

Reshuffle the void

If the draw pile runs out, shuffle the discard pile to form a fresh draw pile and play on.

ANYTIME GRAB

Claim from the discard

At **any point** in the game, if a **planet** sits on top of the discard pile, you may claim it — just discard **three cards** from your hand to take it.

Now meet the cards that will help — and haunt — your journey across the Milkey Way. 🌌

4 The Cards

Eight planets to collect — and a galaxy of powers to bend the rules.

Planet cards

The treasures of the game. Collect all eight to win. **Earth** is special — you must hold it to power up your Moon.

Mercury

Venus

Earth

Mars

Jupiter

Saturn

Uranus

Neptune

— Hazard Cards

PLAY IMMEDIATELY

Black Hole HAZARD

The **worst card in the deck**. It devours **your entire hand** — every card is thrown into the void and sent to the discard pile, resetting your progress to zero.

▸ Your escape: if you hold the **Key**, discard the Black Hole **and** the Key together and your cards are saved.

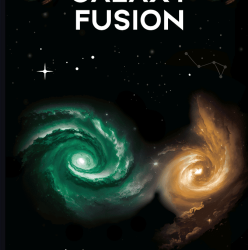

Meteorite HAZARD

A glancing blow. Discard the Meteorite **along with one card of your choice** from your hand.

▸ You decide what you lose — dump your least useful card and move on.

— The Lifeline

The Key LUCKY CARD

Illuminate the darkness. The single most precious card — there is only **one** in the whole deck.

▸ **Saves you from a Black Hole** — discard the Key with the Black Hole to keep your hand.

▸ **Key + Moon** together can substitute for **any one planet** during Stage 2.

— Power Cards

PLAY ON YOUR TURN

Moon POWER

Reach across space and take **one card at random** from any player's hand.

▸ You must hold the **Earth** card for the Moon to work — no Earth, no Moon.

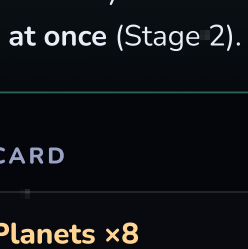

▸ **Key + Moon** can stand in for any planet in Stage 2.

Star POWER

Make a wish. Ask any player for **one card** — either specific ("Mars") or general ("any planet") — and take it if they have it.

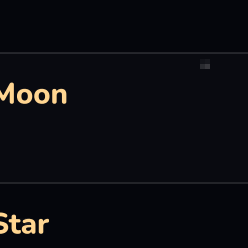

▸ You may wish for **anything except the Alien**.

Sun POWER

Scorching force. Ask any player to **burn a planet card** — they choose which planet of theirs goes to the discard pile.

▸ Defensive tip: a player holding **Pluto** can burn Pluto instead of a real planet.

Comet POWER

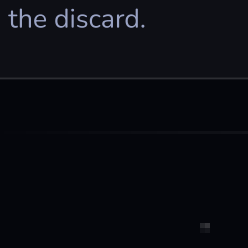

A streak of ice and dust. **Freeze any player's turn** for one round — their next turn is skipped.

Telescope POWER

Survey the heavens. **Peek at three cards** of your choice from any player's hand.

▸ Knowledge is power — scout before you strike with a Star or Moon.

Galaxy Fusion POWER

Two worlds collide. **Shuffle your hand together with any player's**, then redistribute the cards so each of you keeps the **same number** you started with.

— Defense & Special

Alien DEFENSE

Karma is a reflection. If a card is played **against you**, answer with the Alien to **turn that card's effect back on its owner**.

▸ The one card the **Star** can never wish away from you.

Pluto SPECIAL

The dwarf that dreams big. Pluto **acts like a planet card**, but it **never counts** toward your collection of eight.

▸ Perfect as a decoy — or as the planet you sacrifice when the **Sun** forces you to burn one.

5 Quick Reference

The whole galaxy at a glance — keep this page handy while you play.

HOW TO WIN

Collect all eight planets

Secure your first 4 planets face up (Stage 1), then gather the final 4 in hand and reveal them **all at once** (Stage 2). Key + Moon can substitute for one missing planet.

CARD

WHAT IT DOES

Planets x8

Mercury · Venus · Earth · Mars · Jupiter · Saturn · Uranus · Neptune — collect all eight to win.

Black Hole ⚠️

Play at once. Devours your whole hand to the discard — unless you discard it with the Key.

Meteorite ⚠️

Play at once. Discard it plus one card of your choice.

The Key

Cancels a Black Hole. With the Moon, substitutes for any planet in Stage 2. Only one exists.

Moon

Take a random card from any player. Requires the Earth card to play.

Star

Ask a player for any one card (specific or general) — anything except the Alien.

Sun

Force a player to burn one of their planet cards (their choice).

Comet

Freeze a player — they skip their next turn.

Telescope

Peek at any three cards in a player's hand.

Galaxy Fusion

Shuffle hands with a player, then deal so each keeps the same card count.

Alien

Reflect a card played against you back onto its owner.

Pluto

Acts as a planet but never counts toward your eight. Great burn-fodder.

Your turn

1 · Draw one card → 2 · Play one card or pass → 3 · Next player. Empty draw pile? Reshuffle the discard.

Always allowed

A planet on top of the discard pile can be claimed any time by discarding three cards from your hand.
